Quiz 9: FFT

Copyright Oliver Serang, 2018
University of Montana Department of Computer Science

1. Name a problem equivalent to naive convolution.

2. What is the runtime of naive convolution between two vectors of length \( n \)?

3. What does the FFT algorithm do?

4. What is the runtime recurrence for FFT on a list of length \( n \)?

5. Use the master theorem to find the runtime of FFT on a list of length \( n \).
